## Blue Project Congress

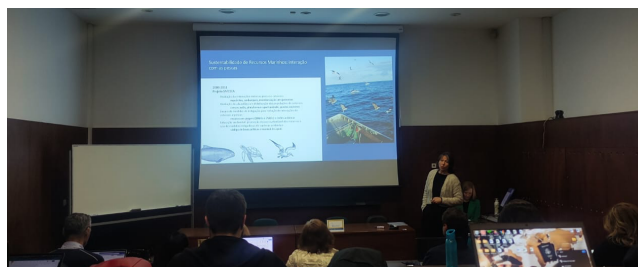

Aimed at being a moment of reflection with the motto of consolidating the future prospects of the blue economy, towards the 2030 Sustainable Development Goals, this was one of the panels on the congress programme. Different topics were covered, namely the sustainability of marine resources, with regard to the fisheries sector. At the same time, projects relating to the circular economy were presented from the perspective of both the agri-food and textile sectors.

Blue biotechnology was also discussed, from training and literacy to business development. The congress featured a wide range of national and international speakers, who provided moments of knowledge sharing.
